Activity 4 - Review a GHG Inventory and Resolve Quality Findings

Alignment: K5 | K6 | A4 | LO2 Duration: 75 minutes Objective: Evaluate inventory evidence, controls, conformance and report completeness before management approval or verification.

Scenario

EcoForge's draft report states a 12% reduction but the base year was not recalculated after acquiring a production line. A refrigerant leak was recorded in maintenance notes but omitted from the inventory, two factor sources are undated, a freight estimate is described as measured data and the report nets purchased credits against gross emissions.

Materials

- Draft GHG report
- Calculation and evidence extracts
- ISO 14064-1 reporting checklist
- Review and finding workbook

Questions

- Which issues affect conformance, accuracy or transparency?
- What evidence is sufficient to confirm each issue?
- Which corrections must occur before approval?
- What limitations should remain disclosed?

Detailed procedure

1. Set review objectives, scope, criteria and independence before examining the report.
2. Trace reported totals to category subtotals, calculation rows and primary evidence samples.
3. Reperform selected calculations and confirm units, factors, GWP basis and rounding.
4. Check boundary consistency, significant indirect emissions, removals, biogenic emissions and offset presentation.
5. Compare the claimed trend with base-year recalculation policy and structural-change evidence.
6. Classify each issue as corrected error, unresolved limitation, control weakness or disclosure gap.
7. Write findings with criterion, objective evidence, evaluation and required disposition without prescribing unsupported solutions.
8. Verify corrections and prepare an approval brief listing residual uncertainty and management decisions.
9. Peer-calibrate finding severity and resolve differences in judgement.

Required evidence

- Review plan and sample log
- Finding register
- Corrected report disclosures

- Management approval brief

Acceptance check

All seeded defects are detected; each finding is evidence-based; corrections are rechecked; the final brief distinguishes resolved issues from residual limitations.
